[1961] [24]p. (foreign text included) 55 refs.
Order from LC or SLA m1\$2.70, ph\$4.80 AEC-tr-4354

Trans. of Akad[emiya] Nauk E[stonskoy] SSR,
[Tallinn]. Institut Fiz[iki] i Astron[omii]. Trudy,
1957, v. 6, p. 63-80.

A study was made of the excited absorption of X-irradiated phosphors on NaCl, KCl, KBr, activated with In, Ti, Ag, Cu, Mn, Pb, Cd. Bivalent ions serve as effective trapping centres for the electrons. No diminution was observed in the activator absorption in the phosphors activated with In and Tl after the X-irradiation. The conclusion was drawn that the ions of the activator cannot serve as trapping centres for the holes, and the hole mechanism of migration of energy from the basic substance to the impurity centres is (Physics--Solid State, TT, v. 5, no. 12) (over)
